

Security & Authentication Guide: Password Recovery

This document outlines the standard operational procedure for resetting lost or compromised user passwords on the Adsparkx platform.

1. Initiating the Password Reset Flow

To reset your password, visit the login portal at <https://app.adsparkx.com/login> and click the 'Forgot Password?' link beneath the sign-in prompt. Alternatively, you can directly access the reset page at <https://app.adsparkx.com/password/reset>.

You will be required to enter the verified email address associated with your Adsparkx profile. Our system will validate the email address and dispatch a secure reset link. For security reasons, the system will display a generic confirmation message even if the email entered does not exist in our database.

2. Using the Secure Password Reset Link

Once the request is submitted, a verification email containing a unique, time-sensitive cryptographic link is dispatched. This token link has a strict validity window of **60 minutes**. If you do not click the link within 60 minutes, it will expire and you must initiate a new recovery request.

Upon clicking the link, you will be redirected to the secure page to choose a new password. Your new password must meet the following complexity parameters:

- Minimum of 10 characters in length
- At least one uppercase letter (A-Z)
- At least one lowercase letter (a-z)
- At least one numerical digit (0-9)
- At least one special character (e.g., !, @, #, \$, %)

3. Common Issues & Troubleshooting

Issue: 'Link Expired' Error

This occurs if you wait more than 60 minutes before clicking the link or if you click an older recovery link after requesting multiple resets. Please ensure you only use the most recent email received, and perform the reset immediately.

Issue: Email Not Arriving

If you do not receive the email within 5 minutes, check your Spam/Junk folders. Ensure your mail server is not blocking notifications from **no-reply@adsparkx.com**. If you use custom corporate email filtering (such as Mimecast or Barracuda), check with your IT administrator to release the message.

Issue: Account Locked

If you enter the incorrect password 5 consecutive times, your account will be locked for security. To unlock it, wait 30 minutes for the automatic timeout release, or follow the automated recovery link flow described above,

which bypasses the lock once completed.
